

REQUISITION NO	:	2013022
DATE	:	15 th July 2013
AVAILABILITY	:	Immediate
JOB POSTING	:	Project Manager – EPCC Projects

Key qualifications for this position include:

- A bachelor's degree in Engineering from an accredited university with minimum ten (10) years of project and engineering management experience in the oil/gas industry.
- Experience on large-scale oil/gas and petrochemical capital projects
- Must have previous project management experience on EPC Project of at least 10 Million USD
- Has clearly demonstrated strong engineering competence
- Ability to work within a diverse cultural environment
- Demonstrated interpersonal/teambuilding skills
- Strong written and oral communication skills

Basic Function & scope

- Directs and manages EPC Project in a manner that achieves project requirements for safety, quality, engineering, schedule, construction, and cost management.

The key responsibilities of this position include:

- Manage the EPC contract in a manner that achieves a quality installation meeting performance parameters set out in the scope of work within the cost and schedule targets in the EPC contract.
- Review and prepare responses to bidder queries during the subcontracting phase
- Control schedule and cost of assigned object(s).
- Manage cost trends emanating from design change.
- Coordinate specialist discipline review of proposed changes.
- Ensure that all actions, works and services undertaken by subcontractor, are in accordance with the EPC contract.
- Ensure compliance with company's objectives, requirements, priorities, policies, procedures, standards, rules, regulations and guidelines provided by company from time to time.
- Ensure that cost effective solutions in engineering design are adopted while maintaining quality, constructability, operability and maintainability.
- Ensure that project is technically sound and optimally designed, engineered to appropriate standards and specifications, meeting required product specification and meeting HSE requirements.
- Ensure achievement of completion Schedule
- Ensure that subcontractor deploys the right quality of personnel at the right time for the required duration.

- Ensure that subcontractor complies with all its obligations under the contract, including adherence to the specifications, schedule and procedures.
- Take necessary corrective action to align project back on track in case of deviations from plans (cost, schedule, quality, HSE, performance, operability, maintainability, etc.).
- Monitor subcontractor performance against its program, deliverables, and milestones in line with progress measurement and reporting system set out in the EPC contract.
- Avoid the variations from contract by taking proactive/preventive actions.
- Coordinate responses to technical audits; HAZOP findings; spec deviations as reported by QA/QC functions; construction site technical queries.
- Monitor the interactions with other packages, projects and stakeholders.
Review and approve the monthly progress and milestone completion certificates.

Position is based in Dhaka frequent and extended duration on site.
